

HCI CAT6A SOLID PLUG

(8PCP-CAT6A)

Description

We hold our CAT 6 RJ45 connectors to high standards with our customer and their network in mind. Even with something as small as an RJ45 connector, we get it right—reliable and blazing fast.

These RJ45 connectors are designed to work specifically with CAT 6, CAT 6A, and CAT 7 cable. These RJ45 connectors are gold plated and work with solid and stranded cable. They have 8 pins and 8 conductors (8p8c). The inserts are also included—they're part of the design. The wire alignment insert provides an efficient cable assembly. Over time this will save time and money on any job.

Also featured on this RJ45 connector is a slim strain relief and shielding. The slim strain relief prevents snag tears and maintains the quality of the cable. Shielding your network prevents signal loss and electromagnetic interference.
